ABSTRACTED-PUB-NO: KR2001103372A

BASIC-ABSTRACT:

NOVELTY - A method and system for selling agricultural products by subscription is provided to enable a user to order products in advance through internet, pay a certain amount of money in advance to help produce agricultural products, and set an optimal price of the agricultural products.

DETAILED DESCRIPTION - **Agricultural** products which users want to buy are ordered in advance. A **manager** server requests a consumer for a deposit. The **manager** server confirms whether the consumer pays the deposit. In the affirmative, the **manager** server pays the deposit to a

**producer**. The **producer** informs the **manager** server of whether shipment of the **agricultural** products is completed. The **manager** server asks the consumer to pay for the **agricultural** products. The **manager** server identifies whether the consumer has paid. In the affirmative, the **manager** server sends the money to the **producer**. The **producer** delivers the **agricultural** products to the consumer. If the **producer** doesn't inform of whether the shipment of the **agricultural** products is completed, it is judged that the **producer** doesn't want to **sell the agricultural** products.
